Bad coding

1. No matter if you don't understand the following code, rewrite it following good practices

```
function pow(x,n)
{
  let result=1;
  for(let i=0;i<n;i++) {result*=x;}
  return result;
}

let x=prompt("x?",''), n=prompt("n?",'')
if (n<=0)
{
  alert(`Power ${n} is not supported, please enter an integer number greater
than zero`);
}
else
{
  alert(pow(x,n))
}
```
